

LEDlight flex 12 8p 48V 1000

- up to 2.6 times higher in-feed length compared to 24 V DC
- ideal for extra long light lines with only one power supply
- excellent color rendering: CRI Ra typ. 94, R9 > 50
- long light lines with only one feed through double layer FPC possible
- very long operating life L90/B10 > 60,000 h at Tc < 80 °C
- current regulation by IC for constant brightness over the entire light line with integrated overheating protection
- with reverse polarity protection diode and TVS surge protection diode
- with high-quality 3M double adhesive tape

Please observe the installation and safety instructions at <https://www.barthelme.de/content/en/manuals.aspx> !

Note re light sources/EPREL: Our LED reels are not subject to classification according to the currently valid regulations. An LED reel contains interconnected light sources, the number and energy efficiency class of which are listed in the data sheet.

ORDER YOUR DESIRED INDIVIDUAL STRIP LENGTH [CUT]: The order quantity is a multiple of the smallest cutting length of the LED strip (cut). Ordering example: To order your required length of 180 cm of LEDlight flex 12 8p 48V 1000 cool white (4000 K): 20x Art.-No. 50012234 (cut length 90 mm x 20 = 180 cm). If you re-quire varying strip lengths then please order each strip length as a separate position.

FURTHER DATA

	50412228	50412233	50412234
Max. operable length ¹	23490 mm		
Storage temperature	-30° C ~ +80° C		
Max. temperature Tc ²	80 ° C		

¹The value given applies to the application of the rated voltage at the first module section. When using a supply line, the maximum operable length changes depending on the supply line length and its cross section. At www.barthelme.de you will find an overview table for orientation.

² The Tc point is marked on each cut. This should be measured in the thermally stable state.

NOTES

LEDs and the electronic components/devices required for their operation are wearing parts and can function for many years depending on use and location. In general, these products are subject to an aging process, the light output of LEDs decreases in the course of their operating life. The aging of LEDs is due to thermal influences. Our LEDs correspond to the operating life, which has e.g. a L90/B10 value. This means that the installed LEDs of a given type retain at least 90% of their luminous efficiency and a maximum of 10% of the installed LEDs can deviate from this. Thus, the decrease of the luminous effect of the LED within the above-mentioned scope within the operating life does not represent a defect according to the current state of technology.

Never glue the LED strip over a profile joint! Due to physical expansion or contraction of the profile due to temperature fluctuations, the LED strip can be damaged. This can be remedied by using the right parts for the solder pads at the joint and by using flexible connections, e.g. soldered flexible wire bridges or LED strip connectors.

The guarantee period for the product is 5 years and begins on the day of shipment. Reference is the date of the delivery bill. The guarantee period may differ for accessories.
